

## Please take care of your PUMP!

1. Don't let water into the bell jars/traps, it makes the pump rust and can be a hazard to the lab.
2. If you do get water in the traps, please clean out immediately, or come and see Coney to do it, but DON'T LEAVE it with stuff in it.
3. When you are finished, please run the pump for 4 minutes after using to clear out any moisture (with nothing attached).

Thank you.....
